

SHREDDER

Shred-Tech's line-up of MDS systems get their amazing performance from the tried and true ST-15H shredder. The cast aluminum ST-15H has exceptional strength without the weight of steel. The MDS line shreds up to 3,000 kgs/hr. The shredder features hub knives, high strength alloy shafts as well as two all new patent pending innovations: cast-in cleaning fingers and a bridgeless vibrating feed hopper®.

CONTROLS

The state of the art Plus 1® micro-control system with advanced intelligence is powerful enough to not only to control and monitor the system, but also allows for a job timer, an automatic bin counter, advanced diagnostics and predictive idle. The Plus 1® system offers a level of control, and range of features, not possible with older, analog control panels.

AUGER COMPACTOR AND AUTO UNLOADING

All MDS Systems come equipped with Shred-Tech's angled compactor design and durable moving floor unloading system. Together, these features ensure maximum payload of up to 6,500 kgs and rapid discharge of shredded material in a few minutes, equating to more time on-route shredding paper and generating revenue.

FEATURES

All Shred-Tech MDS Trucks are equipped with predictive idle, Auto Shutdown and Remote Panel Start/Stop. Predictive idle senses low shredder loads and shuts off the high engine idle when the shredder is unattended and the hopper is empty. Moments later the PTO's are turned off along with the engine. This means never wasting fuel and engine hours.

MDS LINE-UP UK/EURO

Shred-Tech has been building Mobile Shredding Trucks for the UK/Europe for two decades and are pleased to present the most powerful and versatile line-up of industry leading systems.

All Shred-Tech Trucks are available in both "GT Model" - featuring Automated Ground Tipper with patented Bin Tunnel Technology and "H Model" - featuring Internal Shredding Compartment with fold down Side Lift.

Chassis are available in three sizes: 12, 15 and 18 tonne GVW. Shred-Tech's versatile line up provides the performance features you need to start your Mobile Shredding Business or to add to your existing fleet.

Product specifications subject to change without notice.

>> | S | = Standard | O | = Option | X | = Not Available

*Throughput is an estimate based on actual test data and can vary depending upon many factors, including paper type, system maintenance and operator training.

**Legal Payload Capacity is an estimate based on chassis GVWR only. Actual payload can vary depending on many factors including paper type, weather conditions, and system maintenance. Shred-Tech does not guarantee throughput or payload results. †DIN 66399-1: 20011-09 Per section 5.2. Original size shreds may be elevated to next highest security level with mixing & compaction up to a maximum of S4. Shred-Tech performs particle size analyses with new shredders in a controlled test environment. Particle size is affected by knife wear, shredder condition, operating conditions and types of paper being shredded; any variations in these parameters will affect particle size. Therefore Shred-Tech does not guarantee shred size nor does Shred-Tech warrant compliance to any particle size standard including but not limited to standards issued by the following organizations; DIN, NAID, BSIA, RCMP
